

TMC Food Hub Feature Documentation

This document describes the current features, modules, and system behavior of the TMC Food Hub repository based on direct source inspection performed on March 30, 2026. It is intended to be used both as a product reference and as a print-friendly PDF export document.

Document Scope

Customer Experience

Public pages, signup, login, profile, restaurant browsing, cart, checkout, tracking, and reviews.

Owner Portal

Orders, inventory, menu CRUD, categories, reviews, analytics, payment settings, and store configuration.

Admin Portal

Platform dashboard, customer oversight, restaurant oversight, disputes, promotions, analytics, and governance settings.

Backend Services

Sanctum auth, OTP verification, stock integrity, payment proof handling, review APIs, and system settings.

Table of Contents

- 1. Product Overview
- 2. Technology Stack
- 3. Feature Status Summary
- 4. Customer-Facing Features
- 5. Restaurant Owner Features
- 6. Administrator Features
- 7. Backend and System Capabilities
- Implementation Coverage Summary

1. Product Overview

TMC Food Hub is a multi-role food ordering platform built as a full-stack web application. The system currently supports customers, restaurant owners, and administrators through separate experiences and role-aware backend APIs.

- **Customers** browse restaurants, place orders, upload payment proofs, track deliveries, manage profiles, and submit reviews.
- **Restaurant owners** manage menus, categories, stock levels, order fulfillment, payment settings, analytics, and store operations.
- **Administrators** supervise customers, restaurants, disputes, reviews, payouts, promotions, platform settings, permissions, and security configuration.

2. Technology Stack

- **Frontend:** React 19, Vite, React Router, Axios, React Leaflet, Lucide React, jsPDF, html2canvas
- **Backend:** Laravel 12, Sanctum, Eloquent ORM
- **Project layout:** `frontend` for the web application and `backend` for the API and data layer
- **Main data domains:** users, restaurant owners, categories, menu items, orders, order items, reviews, promotions, platform settings, security settings, and activity logs

3. Feature Status Summary

Area	Status	Summary
Customer authentication	Implemented	Email login, signup, OTP verification, Google auth, and forgot-password OTP reset.
Restaurant browsing and ordering	Implemented	Restaurant discovery, menu browsing, cart, checkout, scheduling, receipt upload, tracking, and reorder.
Reviews	Implemented	Verified-order review submission, owner replies, rating summaries, and helpful votes.
Owner operations	Implemented	Orders, inventory, menu CRUD, categories, analytics, earnings views, and payment settings.
Owner promotions	Implemented	Owner promotions management includes listing, filtering, metrics, and promotion creation workflows.
Admin operations	Implemented	Dashboard, orders, customers, restaurants, reviews, disputes, payouts, analytics, promotions, and settings.

Area	Status	Summary
Admin exports	Implemented	Export flows are available across administrative reporting and management areas.

4. Customer-Facing Features

4.1 Public Website and Content Implemented

- Home page with hero, about, features, how-it-works, testimonials, services, events, FAQ, contact, and footer sections.
- Dedicated pages for services, support, FAQ, events, announcements, and news/blog content.
- Announcement detail pages include a PDF export action built with jsPDF and html2canvas.
- Theme support is shared through a central theme context.

4.2 Authentication and Profile Implemented

- Email and password login.
- Google login and Google signup.
- Multi-step signup flow with email OTP verification and legal acceptance.
- Forgot-password flow with reset OTP verification.
- Profile editing, address management, delivery instructions, and password changes.
- Token-backed session persistence using local storage and backend user revalidation.

4.3 Restaurant Discovery and Menus Implemented

- Restaurant search by name or cuisine.
- Cuisine filters, dietary filters, sorting, and pagination.
- Restaurant-specific menu pages with dynamic category tabs, item search, dietary filtering, and similar restaurants.
- Availability-aware menu rendering with stock and out-of-stock states.

4.4 Cart, Checkout, and Payments Implemented

- Login-required add-to-cart flow.
- Single-restaurant cart enforcement.
- Persistent cart storage in local storage.
- Checkout with ASAP delivery or scheduled delivery up to 7 days ahead.
- Restaurant-specific payment methods for COD, GCash, Maya, and bank transfer.
- Non-COD orders redirect to payment proof upload after placement.

4.5 Orders and Tracking Implemented

- My Orders page with ongoing, completed, and cancelled tabs.

- Polling-based order refresh every 5 seconds through shared order context.
- Tracking page with timeline, route map, rider card, payment status, receipt preview, and cancellation timer.
- Reorder behavior for completed orders.

4.6 Reviews and Feedback **Implemented**

- Review submission restricted to delivered orders.
- Star ratings, text feedback, and backend support for review photos.
- Restaurant rating summary and star distribution.
- Helpful vote toggle on reviews.

5. Restaurant Owner Features

5.1 Owner Authentication **Implemented**

- Owner login with dedicated token issuance.
- OTP-backed owner registration with business details and merchant agreement acceptance.
- Owner token refresh and logout flows.

5.2 Owner Dashboard Shell **Implemented**

- Responsive owner portal with grouped sidebar navigation.
- Notification panel, search UI, owner/store profile area, and dark mode toggle.
- Welcome banner for newly onboarded stores.

5.3 Orders, Store Controls, and Payments **Implemented**

- Owner-only order view tied to restaurant ownership.
- Order status progression controls.
- Online payment confirmation and rejection.
- Store operations for open, paused, closed, auto-accept, manual confirmation, and prep time.
- Payment settings for COD, GCash, Maya, and bank transfer.

5.4 Inventory, Menu, and Categories **Implemented**

- Stock updates, refill actions, and low-stock awareness.
- Menu item creation, editing, deletion, image upload, pricing, description, and category assignment.
- Category creation, editing, deletion, and reorder support.
- Availability toggles and auto-toggle behavior based on stock.

5.5 Reviews, Analytics, and Settings **Implemented**

- Owner review inbox with reply support.
- Analytics data for revenue, orders, top items, heatmaps, and high-value orders.

- Settings tabs for account, security, notifications, restaurant profile, store operations, and payment.
- Map-based restaurant location editing using Leaflet.
- Owner order tools include PDF receipt export support.

5.6 Owner Promotions **Implemented**

- Promotions management includes search, status filters, create flow, and metrics cards.
- Promotion listings support ongoing campaign visibility and lifecycle management.

6. Administrator Features

6.1 Dashboard and Oversight **Implemented**

- Dashboard KPIs for partner count, platform revenue, active restaurants, and total customers.
- Revenue chart, restaurant applications, alert stream, and quick actions.
- Platform-wide order management.
- Customer administration and restaurant partner administration.

6.2 Moderation, Finance, and Analytics **Implemented**

- Reviews moderation with status grouping.
- Disputes handling with refund and rejection flows.
- Payments and payouts management.
- Analytics and performance overview sections.

6.3 Promotions and Settings **Implemented**

- API-backed promotions with create, edit, delete, inspect, and extend actions.
- Settings for platform identity, commission, notifications, admin management, roles, activity logs, security, and appearance.
- Roles and permissions editing backed by database tables.
- Activity logs with masked IP display.

6.4 Admin Exports **Implemented**

- Export modals are present in customers, restaurants, reviews, analytics, payments, and promotions.
- Administrative reporting includes export actions across key management and analytics sections.

7. Backend and System Capabilities

- Role-based Sanctum authentication for customers, owners, and admins.
- Email OTP verification for signup and OTP-driven password reset.
- Google credential verification endpoints for customer authentication.
- Store-status enforcement before order creation.

- Stock deduction on order placement and stock restoration on cancellation.
- Receipt upload plus owner-side payment confirmation or rejection.
- Verified-order review enforcement and helpful-vote support.
- Media serving endpoint for stored uploads.
- Platform settings, security settings, activity logs, and roles/permissions support.

Implementation Coverage Summary

- Owner operations cover menus, categories, inventory, promotions, payments, analytics, reviews, and store settings.
- Admin operations cover exports, moderation, disputes, analytics, payouts, promotions, settings, and activity logs.
- Customer order flow covers discovery, cart, checkout, receipt upload, tracking, order history, reorder, and reviews.
- Platform services include authentication, media handling, promotions logic, settings management, and validation rules.

This documentation reflects the repository state inspected during this session. If new features are added or existing flows are expanded, update both the markdown and HTML versions together.
